

PRESS RELEASE

SYNTEAK GROUP launches E-DEK PRO: a world first in marine flooring

Trento, August 25, 2025 – E-DEK PRO is a groundbreaking innovation in the global marine flooring market.

We are proud to say that this product is 100% Made in Italy, designed and developed by us at SYNTEAK GROUP, a Trentino-based company that has been innovating the market for years with new products and solutions. E-DEK PRO is manufactured entirely with Italian raw materials and Italian labor.

Replacing EVA foam while improving performance

E-DEK PRO has been specifically designed to replace EVA foam materials currently dominating the market as the most affordable and widely used option. How? By maintaining their most loved features—softness, lightness, and customization—while increasing durability and elevating the product's aesthetics to a new level.

Two layers for superior performance

E-DEK PRO consists of two layers:

- A **lower EVA foam layer**, which provides lightness, softness, and comfort.
- An **upper plastic polymer layer**, which adds strength, durability, and a realistic wood finish.

This upper polymer layer offers a far more authentic wood effect compared to standard EVA products and protects the lower layer from UV exposure (a major issue for EVA foams), scratches, and impacts. The combination of the two materials is achieved through a complex and proprietary process developed exclusively by SYNTEAK.

High-quality, sustainable materials

We have carefully selected the highest-quality components, including **Vegan OK certified EVA foam**, a feature uncommon in similar products from the US and Asia.

Flexible formats and customization

E-DEK PRO will be available as a **2.40×1.00 m rectangular sheet** for professionals and as **custom-made formats** for shipyards and private boat owners. The product is **4.5 mm thick**, weighs **2.2 kg/m²**, and will be offered in a wide range of colors with the option to request **custom RAL shades**.

Quality at competitive prices

We are confident that this product will shake up the marine flooring market, especially in the small- to medium-boat segment, which has long faced a difficult choice between affordability and quality. E-DEK PRO is designed to resolve this dilemma by offering a high-quality product at competitive prices.

Debuting at major international boat shows

E-DEK PRO will premiere at the **Genoa Boat Show**, followed by **METSTRADE** and **BOOT**. Commercialization will begin immediately after in Europe through the SYNTEAK network and in the US via our partner **DEKit**, with Australia to follow. We are currently seeking partners for the Asian and UAE markets.

Early success with major OEMs

The product has already been unofficially presented to major American and European OEMs, receiving outstanding feedback and soon appearing on boats from globally recognized brands.
